

## Avaya PARTNER® Voice Messaging Solutions

In today's economy meeting customer needs is integral to your business success. The Avaya PARTNER® voice messaging solutions are designed to help you and your employees work more effectively and be more responsive to your customers—all while keeping your communications costs firmly under control.

The PARTNER® Advanced Communications System (ACS) is the communications system designed and developed by Avaya to deliver the powerful, yet easy-to-use, features you need now, plus the ability to expand with your business.

With PARTNER voice messaging solutions, you can help ensure that every caller gets through to your business and is handled efficiently and professionally.

And with the choice of voice messaging solutions created specifically to work with PARTNER ACS and other PARTNER® family telephone systems, it's easy and affordable to take advantage of important extras to help your business deliver the best customer service possible.

### Helping your business be more available and responsive

A flexible PARTNER voice messaging solution helps you stay connected to all your customers and other callers. It offers ways to deliver a personal touch even when you can't answer every call personally—whether you want to use voice mail as a backup (for example, when your receptionist is especially busy answering calls) or to answer all your calls.

In addition to helping you receive messages wherever you are, PARTNER voice messaging solutions help to route callers to the people they need. For example, you can:

- Be responsive to callers 24 hours a day, 7 days a week. With Call Answer Service, callers are greeted by your personalized recording and can leave a detailed message in your personal voice mailbox. Messages can be retrieved anywhere, any time, day or night, from a touch-tone phone. And, each message is stamped with the date and time, so you'll know exactly when callers tried to reach you.

- Make sure customers who call during business hours can always reach a live person. With the ability for callers to transfer out of a voice mailbox to your receptionist or to another extension, you can serve the needs of customers who need to speak with someone immediately.
- Answer calls with a friendly, courteous greeting and deliver the call to the right extension, person, or department. With the Automated Attendant as backup for your receptionist, your calls are answered promptly and directed to the right extension, even at your busiest times.

For instance, callers can select from a personalized recorded menu of options by pressing digits 1 through 9—"For customer service, press 1. To speak with a sales representative, press 2," and so on. Or, callers can dial an extension directly. With PARTNER® Messaging you can customize multi-level menus.

- Have your voice mail system automatically call you when you have a new message waiting in your mailbox. With the outcalling feature, the system can dial up to five phone numbers in turn to find you and alert you to a new message. When the system reaches you, you can log in to the mailbox and retrieve the message on the spot, during the same call.

### Helping your employees be more productive

PARTNER voice messaging solutions also give you new and more convenient ways to improve communication—helping your employees work more efficiently and productively. For example:

- Count on voice mail to get your callers' messages word-for-word, with all their detail and nuances. It can relieve you and your employees of the task of taking messages and relaying them while improving accuracy and your ability to respond to all your callers.
- Provide callers with directions to your office, your hours of operation, and other important information using recorded Automated Attendant. This feature makes it easy for callers to access routine information quickly and frees your employees to speak with callers needing individual attention.
- Create important internal messages and share them among co-workers using personal message distribution lists with PARTNER Messaging. This helps you and your employees get information out quickly and easily to manage your time more effectively.

- For times when you need to work undisturbed at your desk but don't want to miss an important call, the live call screening feature enables you to listen in when a caller is leaving a message. With the touch of a button, this feature can increase your productivity by helping you determine which calls to answer right away.
- Accurately document your conversations with customers and other callers to confirm details, and for future reference, using the record-a-call feature.<sup>1</sup> For instance, it's great for recording merchandise orders.

### Choose the solution that's right for your business

In addition to offering a wide range of productivity, accessibility and service-enhancing features, PARTNER voice messaging solutions come sized and priced to fit your needs—whether you are just starting out with voice mail or want to expand your capabilities.

And with the choice of PARTNER voice messaging solutions, you can start small and grow your voice mail features and capacity as you grow your business.

- Try voice mail with PARTNER® Voice Messaging—ideal for home or small office use. This affordable system provides easy-to-use voice mail with basic features to help improve customer service and employee efficiency. PARTNER Voice Messaging works like a sophisticated answering machine but does not require a separate piece of equipment. Instead, it comes on a special PC card<sup>2</sup> that plugs in to your PARTNER ACS control unit (without cables or adapters) for fast and easy installation.

- Get more flexible, powerful voice mail with the PARTNER Messaging system. This compact system expands basic voice mail features, offering more opportunities to meet your callers' needs and help employees be more productive. Best of all, the PARTNER Messaging system gives you more advanced capabilities while keeping your voice mail easy-to-use and cost effective.

#### PARTNER Messaging offers:

- Dialing by directory
- Multi-level automated attendants
- Broadcast messages
- Forwarded messages via group lists

### All the support you need

Like PARTNER ACS, the entire family of PARTNER voice messaging solutions is backed by a choice of exceptional service and support options available from authorized Avaya BusinessPartners.<sup>3</sup>
